**LOGGING REPORT:**

Subject: Researchers from the University of New Haven are trying to track down microscopic ticks in southwestern Connecticut and investigating 10 towns to find out which parks have been hit most. Ticks infected with lyme disease can latch onto human skin and transmit the infection.

Interviews: Dr. Eva Sepi, University of New Haven, talks about where ticks were found.

Film Footage: N/A

Visuals: N/A

Graphics: N/A

Length: Approximately 30 seconds.

PLEASE NOTE: This story also aired on "News 12" at 10:00 PM.
